Rasool Zandian

Applied AI Engineer | Technical Lead

Tehran, Iran | rasool.zandian@gmail.com

LinkedIn | Engineering portfolio | Cadvert showcase

Open to relocation to the Netherlands and Austria | Employer visa and work permit support required

Professional Profile

Technical lead and product creator combining software architecture, applied AI integration and marketplace leadership. Three years of practical Python experience, alongside broader software and product work. Create and lead Cadvert, supervise technical delivery at Elite Engineering Group, and bring founder experience from INCHAND. Translate business needs into scoped implementation, review criteria and reliable application workflows.

Core Skills

Applied AI: RAG, LangGraph, semantic retrieval with pgvector, OpenAI API integration, intent routing, human review and workflow evaluation.

Application engineering: Python, FastAPI, Pydantic, REST APIs, PostgreSQL, SQLAlchemy, Alembic, React, TypeScript and Three.js.

Delivery and leadership: System architecture, product direction, code review, acceptance criteria, Git, Docker, GitHub Actions, pytest, Vitest, Celery and Redis.

Professional Experience

Technical Supervisor and Technical Lead | Elite Engineering Group

Contract | September 2026 - Present

- Guide technical direction and implementation delivery; translate business requirements into focused scopes and oversee technical review and acceptance.
- Supervise a React and FastAPI platform connecting project registration, access management and team resourcing with PostgreSQL and background processing.
- Review application boundaries, permission checks and workflow validation in a team delivery context. The platform is in development / staging; AI capabilities remain planned.

Elite engineering case study

Founder and CEO | Product and Technology Lead | INCHAND

Operated by Gohar Tabane Bazar | April 2018 - Present

- Founded and led a marketplace business and a 20-person cross-functional organization across engineering, marketing and operations.
- Owned product strategy, architecture and release decisions. Scaled the marketplace to approximately 300,000 monthly visitors and 10,000 monthly orders.
- Developed AI-assisted commerce and support workflows connecting retrieval, agent orchestration, intent routing and human review.

Selected Engineering Projects

Cadvert | Product Creator and Technical Lead

Independent product | Architectural information and visual storytelling

- Define product direction, design the system architecture and lead implementation of a workflow connecting architectural source material, CAD review, visual candidates and property-film assembly.
- Connect a React, TypeScript and Three.js workspace to FastAPI and PostgreSQL; separate AI providers behind capability interfaces and selected processing tasks behind a SwiftUI macOS companion.
- Make rendering reviewable through saved montage revisions, input hashes, scoped worker jobs and validation of returned media before gallery publication.
- Recorded a 46.42-second, 1920 x 1080 / 48 fps montage export in 131 seconds on an Apple M2 with 8 GiB RAM. Peak FFmpeg child-process memory: 337 MiB; one local run, excluding network downloads.

Implemented workflows and selected output artifacts are available for review. The Plan Intelligence extension currently uses a fixed-output interaction prototype; trained-model evaluation is a next step.

Architecture and sample outputs | Public showcase | Sample film

INCHAND AI | Agentic Commerce Operations Copilot

Selected application engineering project

- Developed LangGraph orchestration with department-aware routing, pgvector semantic retrieval, QA/self-check agents and human review for vendor support workflows.
- Built a ticket replay harness to evaluate multi-message conversations before operational acceptance.

INCHAND AI Assistant | Retrieval and Conversational Commerce

February 2026 - April 2026

- Designed multi-source retrieval for product questions, order and parcel tracking, and multi-vendor shipments; combined LLM-assisted and rule-based intent routing.

Education and Professional Development

BSc in Computer Engineering, Software Engineering
Shomal University | 1999 - 2004

Educational background in neural networks and deep learning. Practical development focus: model training, evaluation and integration into reviewable application workflows.

Languages and Working Approach

English: Intermediate; able to communicate. **Persian:** Native.

Use AI-assisted development while retaining responsibility for architecture, code review, behavioral validation and delivery decisions.
