Rasool Zandian

TECHNICAL PRODUCT LEADER | PROPTECH SOLUTIONS ARCHITECT | AI PRODUCT DELIVERY

Tehran, Iran | Open to relocation to Austria | Sponsorship required

rasool.zandian@gmail.com | LinkedIn | GitHub

Professional Profile

Founder-operator and technical product architect with 20 years of experience across software, digital products and commercial operations. Built and scaled a marketplace to approximately 300,000 monthly visitors, 10,000 monthly orders and EUR 150,000 in monthly gross merchandise value. Experienced in taking products from concept through architecture, delivery, production deployment and live operations. Currently applies AI-assisted engineering to accelerate execution while retaining ownership of product decisions, system design, quality and release outcomes.

300K MONTHLY VISITORS | 10K MONTHLY ORDERS | EUR 150K MONTHLY GMV | 20-PERSON COMPANY

Professional Experience

Founder and Technical Product Lead | INCHAND Online Marketplace

Tehran, Iran | 2018 - Present

- Founded and scaled an online marketplace serving approximately 300,000 monthly visitors and processing around 10,000 orders and EUR 150,000 in monthly GMV.
- Set product strategy, system architecture, roadmap priorities and release direction across customer, vendor and internal operations workflows.
- Built and led a 20-person company across engineering, marketing and operations, translating commercial needs into product and technical decisions.
- Established operating processes and delegated execution so the business continues reliably without the founder's physical presence or daily intervention.
- Developed a sustainable commercial model with company profit averaging approximately 8 percent of GMV.
- Led the use of Python, SQL, APIs, analytics and operational dashboards to improve sales visibility, marketplace decisions and execution quality.

Software Developer and Product Builder | Independent and Commercial Product Roles

Iran | 2004 - 2017

- Built software and digital products across the full delivery lifecycle, from early concept and requirements through implementation, deployment and production support.
- Combined software development with commercial, marketing and operational experience, creating products around observable customer and business needs.
- Progressed from hands-on development into architecture, product leadership and cross-functional delivery while maintaining practical technical judgment.

Selected Product Work

Secure CAD to 3D Workflow | Pilot for Faustmann and Kharazie GmbH

Vienna, Austria | 2026 - Present

- Designing a reusable workflow that converts and reviews architectural CAD information as structured three-dimensional project outputs for an established Austrian real estate company.
- Defined a privacy-conscious architecture for sensitive project files, deterministic geometry processing, human review checkpoints and repeatable production runs.
- Working with an Austrian real estate partner to validate the workflow on live development material and identify repeatable commercial use cases for developers and architects.
- Owns product scope, architecture, implementation direction, deployment and pilot acceptance; benchmark accuracy and operating metrics are currently being validated.

AI Commerce Operations System | Independent Product Development

Remote | 2025 - Present

- Designed AI-assisted commerce and support workflows using retrieval, structured state, policy-aware routing and human approval before consequential actions.
- Developed a modular product architecture across FastAPI, PostgreSQL, React, TypeScript and provider-neutral AI integrations, with testing and production deployment controls.
- Focused product decisions on operational reliability, traceable outputs, evaluation, cost visibility and clear human ownership rather than demo-only automation.

Core Capabilities

Area	Capabilities
Product Leadership	Product strategy, zero-to-one delivery, roadmaps, requirements, prioritisation, stakeholder alignment, commercial validation
Architecture and Delivery	System architecture, service boundaries, API design, release planning, production deployment, quality controls, operational support
AI Systems	Applied AI, RAG, agentic workflows, human-in-the-loop controls, evaluation, prompt and context design, AI-assisted engineering
Technology	Python, FastAPI, SQL, PostgreSQL, REST APIs, React, TypeScript, Docker, Git, Linux, AWS, OpenAI APIs, LangGraph, Pydantic
Commercial Operations	Marketplace operations, vendor workflows, growth analytics, team leadership, process design, business model execution

Education and Professional Development

Bachelor of Science in Computer Engineering | Software Engineering
Shomal University, Amol, Iran

Selected professional development: Google Data Analytics; IBM Data Analysis with Python; DeepLearning.AI Machine Learning and Neural Network coursework; AWS Cloud Practitioner Essentials; Gold Medal in Innovation, DIS 2025.

Languages and Mobility

Persian Native | **English** Intermediate working proficiency and actively improving for professional interviews
Mobility Available for full-time relocation to Austria; employer sponsorship required
